A	**A**	**B**	**B**	**C**
Security	Performance	Links	SEO	Accessibility

At a glance

Uptime (last 30 days):	**99%** ↗	Redirect issues:	**0** →
Pages checked:	**25** →	Missing image tags:	**4** ↘
Broken links:	**0** ↗	Missing page descriptions:	**0** →
Pages with errors:	**0** →	Missing or duplicate titles:	**0** ↘

Top priorities

1. Missing image alt tags on some images on the Site Checker page.

2. Colour contrast issues affecting readability on multiple pages.

3. There are links with unclear labels on multiple pages.

Security

↳ 80five.co.uk

SSL Certificate

✓

Expiry: 18th June

Mixed Content

✓

No issues found

DNS Records

!

Missing records: DKIM

Malware & Scams

✓

Not flagged for malware or scams

Security notes

Your website's security basics are in good shape: the security certificate is valid and we didn't find any insecure content being loaded. It's also not currently flagged for malware or scams.

One improvement is email security: Looking at your DNS records, a DKIM wasn't found and DMARC is set to monitoring only. Adding DKIM and tightening DMARC helps stop scammers sending emails that look like they're from you.

Performance

↳ 80five.co.uk

Uptime

99%

Percentage for the past month

Page Speed

96

Score out of 100

Images

Missing size value on one page

Mobile Friendliness

No issues found

Performance notes

Your site has been very reliable this month, with almost no downtime. Mobile layout checks also passed, so pages should display well on phones.

A small improvement: one page has images missing size details, which can make the page "jump" as it loads. Adding image sizes helps pages feel steadier and can slightly improve loading.

SiteScanly

Links

↳ 80five.co.uk

Page Status

✓

All pages return a 200 code

Broken Links

!

External link errors on some pages

Broken Images

✓

No issues found

Redirects

✓

No redirect loops found

Links notes

All checked pages loaded correctly and we didn't find any messy redirect loops. Internal links look healthy, but we did find problems with some links that point to other websites (and a few embedded services) on multiple pages. This can frustrate visitors if they click something that doesn't work.

The fix is usually to update, replace or remove the broken external links, then re-check them regularly.

SEO

↳ 80five.co.uk

Sitemap

✓

Search engines can find your pages

Titles & Descriptions

✓

No missing titles or descriptions

Headings

!

Multiple H1s on some pages

Image Tags

!

4 missing tags on one page

SEO notes

Search engines like Google can find your pages, and there were no missing titles or descriptions, which is a strong base.

The main improvements are tidying headings (some pages have more than one main heading), shortening a few titles/descriptions that are too long, and adding helpful alt text to images. These changes can improve how your pages appear in search results and make them easier to understand.

Accessibility
↳ 80five.co.uk

Readability

⚠

Colour contrast issue on some pages

Navigation

✓

No issues found

Link Labels

⚠

Some links have unclear labels

Page Structure

⚠

Check heading order on some pages

Accessibility notes

Some visitors may struggle to use the site. We found colour contrast issues that can make text harder to read, plus some links/buttons with unclear labels. We also found items that can be reached with the keyboard but aren't properly described for screen-reader users, and a few pages where headings are in the wrong order.

Fixing these helps more people use the site and can reduce missed enquiries.

SiteScanly

This report provides an independent, plain English overview of your website's health for the reporting period shown. It highlights issues and priorities, but does not make changes to your website.

This report is based on automated checks and observations carried out at the time of testing. While care is taken to ensure accuracy, results may vary due to changes made after the report date, third party services, or limitations of automated testing.
